This report covers items included within the SAP calculations.

It is not a complete report of regulations compliance.

1a TER and DER

Fuel for main heating system: Mains gas

Fuel factor: 1.00 (mains gas)

Target Carbon Dioxide Emission Rate (TER) 16.87 kg/m²

Dwelling Carbon Dioxide Emission Rate (DER) 6.87 kg/m² OK

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE) 48.4 kWh/m²

Dwelling Fabric Energy Efficiency (DFEE) 43.0 kWh/m²

OK

2 Fabric U-values

Element	Average	Highest

Semi-detached House 03 November 2022 Liam Mason 93.48 m²

This is a Predicted Energy Assessment for a property which is not yet complete. It includes a predicted energy rating which might not represent the final energy rating of the property on completion. Once the property is completed, an Energy Performance Certificate is required providing information about the energy performance of the completed property.

Energy performance has been assessed using the SAP 2012 methodology and is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO2) emissions.

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO2) emissions. The higher the rating the less impact it has on the environment.

Thermal mass parameter: Indicative Value Low

Night ventilation: False

Blinds, curtains, shutters:

Ventilation rate during hot weather (ach):

Dark-coloured curtain or roller blind
4 (Windows open half the time)

Overheating Details:

Summer ventilation heat loss coefficient: 296.14 (P1)

Transmission heat loss coefficient: 5

Summer heat loss coefficient: 355.19 (P2)
